

*For Immediate Release*

***SecTek is Proud to Implement Leading Edge Technology – GuardTek® Inspector***

October 8, 2009, RESTON, VA – SecTek, Inc. announces the deployment of GuardTek® Inspector, a leading edge electronic handheld field inspection and Quality Assurance system with self-customizable inspection templates to our toolbox of innovative security systems.

**GuardTek® Inspector** provides immediate real-time assessment of officer compliance in the field, which improves the overall effectiveness of our contract operations. Information vital to the efficiency of operations, based on personnel appearance, equipment functionality, and time reporting is easily captured with the latest handheld technology. This information can then be relayed via the internet for further processing and dissemination to site supervision, corporate management and clients. Rules ensure that critical information is promptly routed to the right people for immediate corrective action.

The system's two main components, the PDA-based inspection system and the web-based support system, are easily configured to operate within the parameters of a specific contract's requirements. Site specific templates are configured by our quality control staff placed on the internet and downloaded to the PDA with the push of a button. Our GuardTek® Inspector system can be configured to contain any information that would previously be found on paper checklists. However, our PDA-based inspections are interactive and depending on the type of response provided to given questions, the system will prompt the user for additional information. Inspections include photos and signatures of the guards being inspected and are easily uploaded for further processing. Uploads are done wirelessly, anytime, from anywhere. Once received by the web-based support system, inspection reports are immediately sent out by email according to predefined distribution criteria.

“I am very pleased with the results of our Alpha testing of GuardTek® Inspector system. It is a highly innovative and robust post inspection system and is being deployed across our contracts in both the federal and private sectors. This added technology will assist us in providing our customers with real time information regarding the assertive management of their performance” said Wilfred Blood, President/CEO of SecTek, Inc.

**ABOUT SECTEK, INC:**

Based in Reston, Virginia, SecTek, Inc. is an American-owned protective services company renowned for the superior quality of its security services ([www.sectek.com](http://www.sectek.com)).
