SecTek Introduces Nationally Recognized Security Knowledge Solutions (SKS) Training

November 3, 2009, RESTON, VA – SecTek, Inc., announces the implementation of Security Knowledge Solutions (SKS) computerized checkpoint X-Ray/Magnetometer training to our innovative and comprehensive training curriculum.

SKS's I-Screen technology provides sophisticated industry standard SCORM compliant training in security checkpoint X-Ray image interpretation. The computer based training applications provide our officers and supervisors a variety of scenarios, in a real-time format, that present various weapons and Improvised Explosive Devices (IEDs) for identification. This training improves their effectiveness in the field at our contract operations sites.

“You can invest \$2,000,000.00 in X-ray and Magnetometer equipment to protect facilities from the introduction of weapons, IEDs and nuclear, biological or chemical components, but if the officers running the equipment are not kept current in reading and identifying the items projected on their X-ray machines or detected by their magnetometers, no one is being protected. This added technology will assist us in providing our customers with increased performance and improved knowledge of leading edge technology”, said Christopher Clites, Director of Training, SecTek, Inc.

ABOUT SECTEK, INC:

Based in Reston, Virginia, SecTek, Inc. is an American-owned protective services company renowned for the superior quality of its security services (www.sectek.com). The company offers full spectrum protective services and an accredited Training Academy, which services government and private sector clients throughout the United States.
